Executive Summary Problem Analysis Application Flow Settings Pages Features Admin Role Job Categories Requirements Database Phases Appendices

Executive Summary

Elevator Pitch

TipSharePro is a fair tip distribution calculator that helps restaurants split pooled tips based on each employee's hours, pay rate, and job impact - making everyone's share transparent and compliant.

Problem Statement

Restaurant tip pooling is broken. Existing methods either treat all employees equally regardless of contribution (unfair to high performers and rewards mediocrity), exclude kitchen staff entirely (~~illegal in many states~~ increasing the imbalance in renumeration), or expose servers and Employers to unnecessary tax burden because contributions aren't properly tracked so tip income allocations are inaccurate. Restaurant managers lack the tools to create fair, transparent, legally defensible tip distributions that satisfy both the Department of Labor and the IRS.

Target Audience

Segment	Description	Pain Points
Primary: Restaurant Owners	Multi-location and single-location operators	Need compliance, fairness, retention tool, operational efficiency
Secondary: Restaurant Managers	Day-to-day operations, scheduling, payroll	Need simple data entry, clear reports, staff transparency
Tertiary: Restaurant Staff	Servers, cooks, bussers, hosts	Want fair compensation, visibility into distribution, tax documentation

Unique Selling Proposition

TipSharePro uses a proprietary **Hours x Rate x Variable Weight** algorithm that ensures distributions are fair, legal, and tax-efficient - while keeping the calculation hidden so competitors can't replicate it.

Key Differentiators

- **Sales-based contributions** (same method IRS uses) - not percentage of tips
- I want to make sure you understand an owner can decide to use the percentage of tips method and I will just go on thinking he's an idiot as long as he sees the rest of the value in the program. By using the tips method they lock themselves into higher taxes for tipped Employees and Themselves. Dumb all the way around.
- **Hidden algorithm** (the "Basis" calculation is never shown to users)
- **Tax benefit tracking** - servers get credit for contributions, reducing taxable income and thereby, matching payroll taxes for Employers!
- **Multi-tenant SaaS** - each restaurant is isolated, but owners can view all locations
- **Scenario Sand Box** - test changes without affecting live data

Success Metrics

<30m 30 Minutes?
Time to Value

Problem Analysis

What Specific Problem Does This Solve?

For Restaurant Owners

- Compliance risk with DOL regulations
- Takes a complicated Government Rules based program and makes it accessible and income producing for all. Tipped, Non Tipped and Employers!
- Inability to defend tip pooling if challenged
- Staff retention issues due to compensation disparity
- No visibility across multiple locations

For Managers

- Time-consuming custom Excel creation. Every restaurant would be customizing from scratch.
- Staff disputes. Indirect tip outs solves accusation of or actual bias issues.
- No audit trail for data changes

- Difficulty explaining distribution logic.

For Staff

- Unfair distribution methods
- No transparency in calculations
- Servers taxed on money they give away
- Kitchen staff excluded from a desperately needed income boost.

Why Is This the Right Solution?

i

Validated by Experience: Tom LaChaussee used this system for 12 years across multiple restaurant locations. The Excel-based version worked but wasn't scalable or sellable.

Alternatives Considered

Alternative	Why Rejected
Enhanced Excel	Not scalable, formulas exposed, no multi-user support
Enterprise payroll add-on	Too expensive, overkill for single locations
Equal-split apps	Don't address fairness or compliance needs
Custom development per client	Not scalable as a business

Application Page Flow (9 Pages)

Based on Tom's flow chart, the full application consists of 9 pages:

Deleted: looked like a maze.

Demo Application Flow (Simplified)

Page 1: Login (supplied by TipSharePro) ↓ Page 2: Settings (limited version of Page 3) ↓ Page 3: Distribution Table (scaled back version)

Demo Settings Page NEW INSTRUCTIONS for scaled back Demo version

Help System: ?Notes and !!Notes

The application uses two types of contextual help:

?Note (Informational)

Yellow highlighted "?" - Hover tool tip with explanation. Used for general help and recommendations.
!!Note (Critical) Leave Critical notes out of Demo

Red/orange (Make it orange in Live Free /Full Version – Don't scare them) highlighted "!!" - Modal with "I Have Read and Agree" checkbox required before proceeding.

Full Version Settings Page (Page 3)

Access Control: Admin Only or by Permissions - requires Admin Login/Password with 2FA

!! **Important Note for Admin (First Visit):** "It is highly recommended that you take time to Read about the Powerful features of the SCENARIO SAND BOX. If you started with DEMO and are happy with the Data you entered, the Data can be uploaded to SCENARIO SAND BOX." DELETE

Settings Tabs - Full Version

Tab	Description	Type
Locations	Force completion of location data on first entry	Required First
Choose Location	Dropdown to select location	Display
Date, Time and Zone	System date/time settings	Required
Set Launch Date	First Day of First Pay Period collecting contributions. When ready. Shouldnt be set immediately. On launch date SSB settings are no longer uploadable. Upload before Launch Date.	Required

Tab	Description	Type
Pay Periods	Weekly, Bi-Weekly, BiMonthly, Monthly	Required
Last PPE Date	Establishes spread of dates	Required
Enter Pay Days	Day of week or days of month	Required
Set Contribution Criteria	CC Sales, CC Tips, All Tips, or All Sales	Required
Enter Contribution %	Based on criteria above. Remind Why Sales is best	Required
User Permissions	Set user roles and access	Admin Only
Implement Change Date	Schedule changes for future PP Beginning	Admin Only
Scenario Sand Box	Access to experimentation module	Admin/Manager

Features BLOCKED in Demo (Available in Full Version)

- Location settings
- Date, Time and Zone
- Pay Period Type
- Last PPE date
- Pay Day
- Launch Date
- Users/Permissions
- Email permissions
- Scenario Sand Box
- Go To All Data Links

Feature Specifications

P0 Features (Must Have - MVP) **PO Features?? MVP??**

Feature 1: Core Tip Calculation Engine

P0 - Critical
User Story
As a restaurant manager, I want to enter daily contribution data and have the system automatically calculate each employee's share of the tip pool, so that I can distribute tips fairly and efficiently without putting myself in jeopardy with the IRS or Labor Depts.

Acceptance Criteria

- Given a list of employees with hours worked, pay rates, and job categories

  That's just the first time, otherwise previous employees are saved and only hours are needed. As long as there are no other changes. New Emps, new wages etc. When you get all hours entered you get the whole table looking just like it is going to print. Bam Fast. We have to be fast after PPE cause Payroll dept is always crying they're overworked.

- When the manager triggers calculation. No calculate to trigger. Its real time
- Then the system computes each employee's share using Hours x Rate x Weight
- And the total shares equal exactly the total pool amount (no rounding errors)
- **And the "Basis" value is never displayed to any user**

Edge Cases

- Employee with 0 hours = $0 share (no division by zero)
- Single employee = 100% of pool
- Pool amount of $0 = all shares $0
- Decimal rounding must reconcile to exact total (adjust smallest share if needed)

Feature 2: Daily Contribution Entry

P0 - Critical
User Story
As a data entry designee, I want to quickly enter each server's daily sales and tip contribution, so that the pay period totals are accurate. Daily Data entry is fast because the true up doesn't have to happen until PP Contribution Log. Can we get sales data to load directly into the PP Contribution log from the different POS systems out there? Only saves a few minutes per person but some of these knuckleheads don't know how to do basic business math. ie: For Adjusted sales they may need to subtract take-out from net sales. If you start talking minor calculations they lock up, get glazed eyes and need to go sit in the corner.
Acceptance Criteria

- Date navigator (previous/next day buttons) I would like the day and date for sureness.
- Enter server sales amounts, system calculates contribution at configured rate
- We don't need adherence to the rate until PP is calculated. If missing a whole day it would be best to address it right away.

- ~~Allow override with~~ Enter actual contribution amount. At this point just enter whatever they put on their envelope.
- "Actual Contribution" is what enters the pool (not calculated)
- Running totals updated in real-time

Feature 3: Pay Period Summary

P0 - Critical
User Story
As a manager, I want to see all server contributions for a pay period in one view, so that I can verify totals before calculating distribution.
Each Contributor is held responsible by management policy. I always allowed up to a 10% shortage. If they were more than 10% short then they lose the buffer and have to make up the whole amount.
Acceptance Criteria

- Grid showing servers in rows with totals column
- Each server's total sales, calculated contribution, and actual contribution
- "Attested" column with checkmark + initials (nobody ever used it – we should leave a place for initials off)
- Print button generates PDF ~~without wage data~~. There is no wage data on PP Contribution report. Just each persons adjusted sales for the period, The proper % applied to get $ should be in, Actual Contribution and the difference. If The difference is more than 10% below there should be a required make up amount in the next period. If a whole day is missing the employee needs to make it up ASAP. Before Payday. Management will have to develop a policy for non-compliance with a mandatory contribution. They cant withhold it automatically but they can terminate the employee. So hopefully something short of that is agreeable.

Feature 4: Pool Distribution Report

P0 - Critical
User Story
As a restaurant owner, I want to see how the tip pool is distributed to each employee, so that I can verify fairness and post for staff review.
Key Requirements

- Employee name, location, role, hours, rate, share %, share amount location will auto fill
- **NO "Basis" column ever shown** (proprietary algorithm)
- "Received" column shows whole-dollar amounts Instead of received lets call it the "Share" Column. Received was for initials and again nobody used it.
- PDF print hides wage column (confidential) No weights printed Either+

- Role badges with color coding
- Printing Distribution or Contribution Posted Employee Transparency notification a 2nd time or more should ask "Changes Made? Re-Post if Yes." Ok tab. Just a reminder.

Role Badge Colors

Server Bartender Cook Busser Host

Feature 5: Settings Configuration

P0 - Critical
User Story
As an admin, I want to configure contribution rates, job categories, and weights, so that the system reflects my restaurant's priorities.
Configuration Options

- Contribution rate: Dropdown 1-5 with 0.25 increments + static % sign
- Job categories: Configurable list (Server, Cook, Busser, Host, etc.)
- Variable weights: Dropdown 1-5 with 0.25 increments (17 options)
- Pay period type: Weekly, bi-weekly, semi-monthly
- Help (?) icons next to each setting with tooltip explanations !!Notes – Critical notes on all the above if changed on or after Launch date.

P1 Features (Should Have - Post-MVP)

Feature 6: User Authentication & Authorization

P1 - Important
Role Permissions Matrix

Action	Designee	Manager	Admin
Enter daily data	Yes	Yes	Yes
Edit current period	Yes	Yes	Yes
Edit archived data	No	No	~~Yes~~ NO. Fix in next pool
Change weights	No	No	Yes
Change settings	No	No	Yes
Assign users	No	Designees only	Yes
View other locations	No	No	Yes
Access Scenario Sandbox	No	Yes	Yes

Security Requirements

- 2FA via email or and? SMS only (no authenticator app per client request)
- Session timeout with countdown warning
- Device authorization for Admin/Manager

Feature 8: Scenario Sand Box

P1 - Important Any Printing From DEMO or SSB will only be the Distribution table. DEMO or SSB print should show the word "EXAMPLE" in Faded large print so that it can never look like an intended Posted Employee Transparency notification.

User Story

As a manager, I want to test different contribution rates or weight changes without affecting live data, so that I can see the impact before committing. I also want to use this to calculate corrections for missed employees or terminated employees.

Critical Data Flow Rules

Phase	Data Flow Direction	Allowed
Before Launch Date	Sandbox → Production	**ONE TIME ONLY** via "Upload To Free Trial/Full Version" button
After Launch Date	Sandbox → Production	NEVER - changes cannot flow to live data
After Each Payday	Production → Sandbox	**AUTOMATIC** - archiving replaces sandbox data

Use Case: Forgotten Employee (Johnny the dishwasher)

1. Load last paid pool in Sandbox
2. Add Johnny's Wage, Hours, Job Role
3. See what his share would have been
4. Print for documentation
5. Options: Pay from house funds (enter as prepaid) See my pre-paid excel example attached OR add to next pool with note

Use Case: Employee Terminates Before First Pool

1. Plug new employee's Hours, Wage, Job Role into last period's Sandbox data
2. Calculate estimated share
3. Print as proof of estimated earnings
4. Include in final check

2 Features (Nice to Have - Future) **???? Future**

- **Expert Admin Panel (Command Center)** - Back-office for managing all customer accounts, subscriptions, trial conversions
- **Email/SMS Notifications** - Trial expiration alerts, countdown reminders
- **Audit Logging** - Who entered/changed data and when
- **YTD Reports** - Annual summaries for W2 preparation – These are critical

The Administrator Role

!! Critical Warning: "Do not give Admin privileges to anyone you do not trust to keep you out of trouble from Labor Department scrutiny."

The Administrator has **FULL responsibility** for setting:

- Contribution Rate
- Job Roles
- Each Job Role's variable "weight" based on Admins reasonable opinion of that roles' overall contribution to the chain of service in their restaurant.
-
- **Legal Accountability**

- Tip pools may be analyzed for reasonableness and fairness by state Labor Boards
- Admin may be required to justify reasoning and methods
- Must keep Contribution Rate, Job Roles, and Weights FAIR and REASONABLE
- Changes require proper notification to affected employees

Change Notification Requirements

Change Type	Who to Notify	Notice Period	Method
Contribution Rate Increase	All Contributors (servers)	30 days written	Signed acknowledgment form
Contribution Rate Decrease	All Distribution Beneficiaries	30 days written	Signed acknowledgment form
Individual Job Category Change	That individual	1 full pay period	Face-to-face, documented
~~**Individual Weight Change**~~	~~That individual~~	~~1 full pay period~~	~~Face-to-face, documented~~
~~**Multiple Weight Changes**~~	~~All negatively affected~~	~~1 full pay period written~~	~~Signed acknowledgment form~~

If a Critical Setting is changed and the required time of notice is not reflected in the implementation date can it prompt a corrected date? This can be overruled by Admin but a critical note needs "Read and Agree" prompting Email and SMS notification. There is only 2 Critical Changes that require Notification Now. Contribution % and Job Category. Lets leave Weight change out. That's going to change often in the beginning till it gets dialed in. Most Weight changes will occur because of Job Category Changes. Demotion or promotion.

Audit Trail Requirements

The system **MUST** log all Admin Settings changes:

- Date of change
- Location affected
- What critical area was changed
- Who made the change
- Before/after values
- **UN-EDITABLE record** (for legal protection)

"If someone goes in and changes a critical variable and thinks it wise to blame my program I can produce the un-editable entries through my portal."

Job Categories & Weights

Predefined Job Categories Cool 5 highlight colors. Including Colors complicated everything but I'll explain.

Assign a Job Category to a Color. If you don't have enough categories for all colors don't use it. You can use it at a later date for a whole new category when you expand. If you have more categories than colors – combine something – you get 5 colors. A color key will be provided at the bottom of the Distribution Table with a the title you gave for that category. Lots of possibilities means lots of reward control. For Example:

Kitchen (BOH) – Orange – ie: Lead Cook; Line Cook; Pastry Chef; Pantry Chef,

Bar – Cyan - Or You Don't have a bar but have a category you would like on their own. FOH Clam Shuckers. You could put Runner in with Shuckers and call it FOH support.

Non Tipped (FOH) – Violet – ie; Host/Hostess; Busser; Cashier; Runner

Support - Lime Green – ie: Dishwasher; Busser; Prep Cook; Bar Back

Write In (Big Leagues) – Yellow – ie: Banquet Chef; Maitre D or Sommelier

Now choose a whole number category weight between 1 and 5 based on your opinion of that categories impact on Customer Satisfaction. Doesn't matter at this point you get to test it out before you go live.

Assign all your Pool Share Distribution beneficiaries to the appropriate Category (Color) when you enter their name in the Distribution Table. When Category weight pops up push = or – to go up or down within that weight. Its not always cut and dried as a few jobs can be cross training or in multiple roles and can fit in more than one category. Like a dishwasher who is learning to prep. Or a dishwasher who is learning to Host and fits in the FOH category. Put the person in the category that fits best.

That's it. Whadoyathink, Tim? Doable? I spent like 2 hours just adding colors to Job Categories. I really like the idea of getting some color on the postings. Maybe with a logo.

Weight System

- **Category Range:** 1 – 5 in Whole Numbers
- **Weight 1:** Lowest share component in pool
- **Weight 5:** Highest share component in pool
- **Keep it Simple:** at first, but you may see the need for differentiation.
- **Weight Plus:** Everyone in the same Job Category can get the same weight or can be assigned a Larger fraction of that number. Lets say you gave BOH a 3 weight. Say you have 6 Cooks. 2 are super Spats that have been with you for years (Lead Cooks) 3 are good and have been with you less than a year. One just started yesterday. There is no reason they should all get the same weight just because they are in the same category. New Guy can can be assigned a 3.25, mid guys can be assigned 3.5's and the Super Spats can be given 3.75's.

Example: Clam Shuckers

- Regular shuckers: Weight 3
- Lead Shucker (super star, non-supervisory): Weight 3.75
- Combined with higher hourly wage = appropriately larger share

Key Principles

1. **Hours x Rate x Weight** formula rewards:
    - Experience (most reflected in the hourly rate and in a minor way in the
    - + weight)
    - Hours worked – Sometimes your best people only work the busiest times but end up with the least hours.
    - Job category impact on customer satisfaction

2. **TipSharePro differentiator:** Wages as a factor - "The single biggest determining factor of who, in managements opinion, is contributing most to the Chain of Service."
3. **Fairness over equality:** "If the pool was done on a straight hours worked times a single job category weight, then Head of Surgery would be getting the same pool rate/hr as the rookie surgeon.

Estimated Impact

- $100K monthly sales → ~$1,000 pool per pay period
- Annual: ~$26,000 in additional compensation for pool recipients
- Benefit: Reduced turnover = reward for management

Requirements Documentation

Non-Functional Requirements

Performance Targets Huh?

Metric	Target	Measurement
Page Load Time	< 2 seconds	Time to interactive
Calculation Time	< 500ms for 100 employees	Server processing
API Response Time	< 200ms (95th percentile)	Backend latency
Database Query	< 100ms	Slow query log

Scalability Needs Huh?

Dimension	Target	Design Approach
Concurrent Users	1,000	Stateless API, connection pooling
Customers	500 restaurants	Tenant isolation, indexed queries
Locations per Customer	20	Efficient joins
Employees per Location	100	Pagination, lazy loading
Pay Periods (History)	5 years	Data archiving, partitioning Technically IRS requires 7 but maybe prompt to print EOY data before purging at 5 years.

Security Requirements

Requirement	Implementation
Authentication	Username/password + 2FA (email or SMS)
Authorization	Role-based access control (Admin, Manager, Designee)
Data Encryption	TLS 1.3 in transit, AES-256 at rest
Session Management	30-minute timeout with countdown warning No activity- 5 Minutes
Tenant Isolation	Database-level row filtering, never trust client – Huh?
Audit Trail	Log all data modifications with user/timestamp

Database Schema (Conceptual)

Multi-Tenant Data Model

Deleted Database Schema

Development Phases

Phase 1: Demo (Current Priority) See my new notes for conflict.

Static/interactive demo for marketing. No authentication. Settings preview with some features blocked. Sample data entry. Results/distribution display. PDF print capability. Lives on TipSharePro.com landing page.

Phase 2: Full Single-Location Version

Real authentication (email/password + 2FA). Complete settings configuration. Daily entry workflow. Pay period calculations. Distribution reports. Cloud data storage. Stripe subscription integration. – Card service provider? Have one. I have authorize.net for web payments. Left over from online take out at the restaurants.

Phase 3: Multi-Location Support

Location selector. Admin view across locations. Per-location pools. Aggregated reporting. Can Admin have capability to export settings changes to all locations? Admin may want different implementation dates across locations for notification purposes.

Phase 4: Advanced Features

Expert Command Center. Scenario Sandbox enhancements. YTD archiving. W2 reporting export. Advanced audit logging. Email/SMS notifications.

Critical Questions Checklist

Verified Items

- ✓

  Existing solutions we're improving upon?
  Yes: Basic Excel tip pooling, enterprise payroll add-ons. We're targeting the mid-market with a specific Hours x Rate x Weight algorithm.

- ✓

  What's the minimum viable version?
  Demo (Phase 1): Interactive preview with sample calculations, no login, PDF export.

- ✓

  Potential risks or unintended consequences?
  Legal Risk (compliance), Privacy Risk (wage data), Fairness Perception (hidden algorithm) Fair and reasonable is very subjective but it can come into question and be enforceable. Repeated offenses will likely be assessed Civil Money Penalties (CPM). ie: One thing that may not be given second chances is allowing Owners, Managers or Supervisors to share in the pool! That may well trigger an instant (CMP).

- ✓

  Platform-specific requirements?
  Web-first, responsive design, PDF generation in browser

Resolved Questions (January 9, 2026)

- ✓

  Q1: Scenario Sand Box Purpose
  See detailed specification in Features section. The Demo focus should be on the Distribution page next so Demo is ready.

- ✓

  Q2: Multiple Job Categories / Same Employee Different Positions
  YES, this happens. Posted Distribution Report: Keep earnings SEPARATED by position. YTD/EOY Totals: COMBINE into single employee line. Actually this happens a lot! People are always cross training. Besides the State gives raises almost every year and they don't usually coincide with the beginning of Pay Period .

- ✓

  Q3: Historical Rate Changes / Mid-Period Raises
  Make another entry on Distribution Table with new rate. Policy: Tell managers NOT to give raises mid pay period.

- ✓

  Q4: Cloud Storage Costs
  Tom needs advice. Initial: Pay per GB. Future goal: Flat fee per TB. Subscription should cover storage + legal + accounting + employees + advertising.

Remaining Gaps

- ?

  Prepaid Entry Handling: Exact workflow for adjustments via prepaid line needs detailed specification. Prepaid amounts must flow to YTD and EOY totals. I know your thinking about how to track that stray entry but what about name change? A gal gets married and changes last name. I got ideas but you accounting nerds probably already have a widget!? I am sending a copy of how we tracked Paid ins on the Distribution page. We paid tips out in cash, which I don't recommend, so the bookkeeper just made an entry on our daily accounting for a paid in.

- ?

  Trial Period Implementation: Free Trial IS the Full Version (no "Free Trial" label visible). Countdown display in last 10 days. Last 5 days: Email and text alerts to Administrator. We do need to make sure Scenario Sand Box is well labled.

- ?

  Trial-to-Paid Data Migration: Does trial data persist when converting to paid? (Assumed YES) Any cleanup? or verification required? I think Yes too. Trial has an end date but things happen and they may have trouble migrating from SSB.

Maybe the SSB doesn't get wiped out until the first archive date and all I have to do is reactivate their Upload button.

Appendices

Appendix A: Glossary

Term	Definition
Contribution	Amount a server puts into the tip pool (% of sales)
Distribution	Amount an employee receives from the tip pool
Basis	Hidden calculation: Hours x Rate x Weight (never shown)
Variable Weight	Management-assigned factor (1-5) for job category impact
Pay Period Ending (PPE)	The last day of a pay cycle
Scenario Sandbox	Test environment for what-if calculations
Designee	Data entry role with limited permissions
Tenant	A restaurant organization in the multi-tenant platform

Appendix D: Why Use All Sales as Contribution Factor

IRS Alignment

"All Sales" is adjusted for (by IRS standards): Sales tax, Take-out orders, Retail sales, Non-tipped meals, Owner meals

Why NOT Use CC Tips or All Tips

Method	Problem
CC Sales	Cash tips not properly accounted for.
CC Tips	Understates actual tips received
All Tips	Directly tipped workers easily hide cash tips
Cash Apps -	Customers are using them specifically intending to bypass accounting.

"The whole reason for doing a Chain of Service pool is to put more income into the hands of BOH workers who management can't afford to get significant raises too because minimum wage increases eat up labor dollars first."

— *Tom LaChaussee*

Appendix E: Design Feedback from Tom

Element	Feedback
Foundation colors	"Mostly cool" - approved
Text colors	"Like it" - approved
"Mahogany" color	Came through as dark olive - "I like the dark olive"
Pastel accents	**"Don't get too enamored"** - wants more bold color
Overall	"Throw in some color or I'll fade off to sleep"
Logo reference	**"Take a look at my Logo. Not bashful."**

Appendix G: Logo & Brand Assets

File	Description	Use Case
fulllogo.png	Full logo with text + tagline	Marketing materials, website header
fulllogo_transparent.png	Transparent background	Over images/colored backgrounds
icononly_transparent_nobuffer.png	Icon mark only	App icon, favicon
textonly.png	Text wordmark + tagline	Text-only contexts

Brand Colors (Extracted from Logo)

Burnt Orange #E85D04
Lime Green #82B536
Navy Blue #1A4B7C
Cyan #35A0D2

Appendix C: Client Requirements Source

All requirements derived from:

1. Chat transcript: December 9, 2025 - January 4, 2026
2. Original Excel workbooks
3. Marketing documents
