TipSharePro.com

POWERFUL * FAIR * TRANSPARENT

Product Requirements Document

January 9, 2026

Client: Tom LaChaussee

Developer: Tim Heineccius

Executive Summary

Elevator Pitch

TipSharePro is a fair tip distribution calculator that helps restaurants split pooled tips based on each employee's hours, pay rate, and job impact - making everyone's share transparent and compliant.

Problem Statement

Restaurant tip pooling is broken. Existing methods either treat all employees equally regardless of contribution (unfair to high performers), exclude kitchen staff entirely (illegal in many states), or expose servers to unnecessary tax burden because contributions aren't properly tracked. Restaurant managers lack the tools to create fair, transparent, legally defensible tip distributions that satisfy both the Department of Labor and the IRS.

Target Audience

SEGMENT	DESCRIPTION	PAIN POINTS
Primary: Restaurant Owners	Multi-location and single-location operators	Need compliance, fairness, retention tool, operational efficiency
Secondary: Restaurant Managers	Day-to-day operations, scheduling, payroll	Need simple data entry, clear reports, staff transparency
Tertiary: Restaurant Staff	Servers, cooks, bussers, hosts	Want fair compensation, visibility into distribution, tax documentation

Unique Selling Proposition

TipSharePro uses a proprietary **Hours x Rate x Variable Weight** algorithm that ensures distributions are fair, legal, and tax-efficient - while keeping the calculation hidden so competitors can't replicate it.

Key Differentiators

- **Sales-based contributions** (same method IRS uses) - not percentage of tips
- **Hidden algorithm** (the "Basis" calculation is never shown to users)
- **Tax benefit tracking** - servers get credit for contributions, reducing taxable income
- **Multi-tenant SaaS** - each restaurant is isolated, but owners can view all locations
- **Scenario Sand Box** - test changes without affecting live data

Success Metrics

50	>90%	80%
PAID LOCATIONS YEAR 1	MONTHLY RETENTION	TRIAL ACTIVATION

<30m
TIME TO VALUE

Problem Analysis

What Specific Problem Does This Solve?

For Restaurant Owners

- Compliance risk with DOL regulations
- Inability to defend tip pooling if challenged
- Staff retention issues due to compensation disparity
- No visibility across multiple locations

For Managers

- Time-consuming manual Excel calculations
- Errors leading to staff disputes
- No audit trail for data changes
- Difficulty explaining distribution logic

For Staff

- Unfair distribution methods
- No transparency in calculations
- Servers taxed on money they give away
- Kitchen staff excluded from tips

Why Is This the Right Solution?

¡ **Validated by Experience:** Tom LaChaussee used this system for 12 years across multiple restaurant locations. The Excel-based version worked but wasn't scalable or sellable.

Alternatives Considered

ALTERNATIVE	WHY REJECTED
Enhanced Excel	Not scalable, formulas exposed, no multi-user support
Enterprise payroll add-on	Too expensive, overkill for single locations
Equal-split apps	Don't address fairness or compliance needs
Custom development per client	Not scalable as a business

Application Page Flow (9 Pages)

Based on Tom's flow chart, the full application consists of 9 pages:

```

Settings Page Specifications

Demo Settings Page

The Demo Settings page is a limited version of Page 3 with some tabs/links blocked.

> **Access Method:** Open by double clicking the App icon (see Logo). First page is simple Log In/Password supplied by TipSharePro. Next page in Demo is Settings Page.

Welcome Display: "Welcome Admin (Name of Contact & Company)"

Settings Steps

STEP	TAB/FEATURE	DESCRIPTION
Step 1	Method for Contribution %	Check box for: CC Sales, CC Tips, All Tips, or All Sales
Step 2	Estimate Monthly $ Amount	Open entry box (whole dollars)
Step 3	Enter Contribution %	Dropdown varies by Step 1 choice
Step 4	Enter Job Categories	Checkbox selection from predefined list + 5 write-ins
Step 5	Job Category Weights	Dropdown 1-5 in 0.25 increments per category

Step 3 Contribution % Logic

- If CC Sales, CC Tips, or All Tips selected: Dropdown of **5-25% in 0.5 increments** of Tips Only
- If All Sales selected: Dropdown of **1-5% in 0.25 increments** of (adj) Sales

Help System: ?Notes and !!Notes

The application uses two types of contextual help:

> **?Note (Informational)**

Yellow highlighted "?" - Hover tooltip with explanation. Used for general help and recommendations.

!!Note (Critical)

Red/orange highlighted "!!" - Modal with "I Have Read and Agree" checkbox required before proceeding.

Full Version Settings Page (Page 3)

Access Control: Admin Only or by Permissions - requires Admin Login/Password with 2FA

!! **Important Note for Admin (First Visit):** "It is highly recommended that you take time to Read about the Powerful features of the SCENARIO SAND BOX. If you started with DEMO and are happy with the Data you entered, the Data can be uploaded to SCENARIO SAND BOX."

Settings Tabs - Full Version

TAB	DESCRIPTION	TYPE
Locations	Force completion of location data on first entry	Required First
Choose Location	Dropdown to select location	Display
Date, Time and Zone	System date/time settings	Required
Set Launch Date	First Day of First Pay Period collecting contributions	Required
Pay Periods	Weekly, Bi-Weekly, BiMonthly, Monthly	Required
Last PPE Date	Establishes spread of dates	Required
Enter Pay Days	Day of week or days of month	Required
Set Contribution Criteria	CC Sales, CC Tips, All Tips, or All Sales	Required
Enter Contribution %	Based on criteria above	Required
User Permissions	Set user roles and access	Admin Only
Implement Change Date	Schedule changes for future PP Beginning	Admin Only
Scenario Sand Box	Access to experimentation module	Admin/Manager

Features BLOCKED in Demo (Available in Full Version)

- Location settings
- Date, Time and Zone
- Pay Period Type
- Last PPE date
- Pay Day
- Launch Date
- Users/Permissions
- Email permissions
- Scenario Sand Box
- Go To All Data Links

Feature Specifications

P0 Features (Must Have - MVP)

Feature 1: Core Tip Calculation Engine

P0 - CRITICAL

USER STORY

> *As a restaurant manager, I want to enter daily contribution data and have the system automatically calculate each employee's share of the tip pool, so that I can distribute tips fairly and efficiently.*

ACCEPTANCE CRITERIA

- Given a list of employees with hours worked, pay rates, and job categories
- When the manager triggers calculation
- Then the system computes each employee's share using Hours x Rate x Weight
- And the total shares equal exactly the total pool amount (no rounding errors)
- **And the "Basis" value is never displayed to any user**

EDGE CASES

- Employee with 0 hours = $0 share (no division by zero)
- Single employee = 100% of pool
- Pool amount of $0 = all shares $0
- Decimal rounding must reconcile to exact total (adjust smallest share if needed)

Feature 2: Daily Contribution Entry

P0 - CRITICAL

USER STORY

> *As a data entry designee, I want to quickly enter each server's daily sales and tip contribution, so that the pay period totals are accurate.*

ACCEPTANCE CRITERIA

- Date navigator (previous/next day buttons)
- Enter server sales amounts, system calculates contribution at configured rate
- Allow override with actual contribution amount
- "Actual Contribution" is what enters the pool (not calculated)
- Running totals updated in real-time

Feature 3: Pay Period Summary

P0 - CRITICAL

USER STORY

> *As a manager, I want to see all server contributions for a pay period in one view, so that I can verify totals before calculating distribution.*

ACCEPTANCE CRITERIA

- Grid showing servers in rows with totals column
- Each server's total sales, calculated contribution, and actual contribution
- "Attested" column with checkmark + initials
- Print button generates PDF without wage data

Feature 4: Pool Distribution Report

P0 - CRITICAL

USER STORY

> *As a restaurant owner, I want to see how the tip pool is distributed to each employee, so that I can verify fairness and post for staff review.*

KEY REQUIREMENTS

- Employee name, location, role, hours, rate, share %, share amount
- **NO "Basis" column ever shown** (proprietary algorithm)
- "Received" column shows whole-dollar amounts
- PDF print hides wage column (confidential)
- Role badges with color coding

ROLE BADGE COLORS

SERVER BARTENDER COOK BUSSER HOST

Feature 5: Settings Configuration

P0 - CRITICAL

USER STORY

> *As an admin, I want to configure contribution rates, job categories, and weights, so that the system reflects my restaurant's specific policies.*

CONFIGURATION OPTIONS

- Contribution rate: Dropdown 1-5 with 0.25 increments + static % sign
- Job categories: Configurable list (Server, Cook, Busser, Host, etc.)
- Variable weights: Dropdown 1-5 with 0.25 increments (17 options)
- Pay period type: Weekly, bi-weekly, semi-monthly
- Help (?) icons next to each setting with tooltip explanations

P1 Features (Should Have - Post-MVP)

Feature 6: User Authentication & Authorization

P1 - IMPORTANT

ROLE PERMISSIONS MATRIX

ACTION	DESIGNEE	MANAGER	ADMIN
Enter daily data	Yes	Yes	Yes
Edit current period	Yes	Yes	Yes
Edit archived data	No	No	Yes
Change weights	No	No	Yes
Change settings	No	No	Yes
Assign users	No	Designees only	Yes
View other locations	No	No	Yes
Access Scenario Sandbox	No	Yes	Yes

SECURITY REQUIREMENTS

- 2FA via email or SMS only (no authenticator app per client request)
- Session timeout with countdown warning
- Device authorization for Admin/Manager

Feature 8: Scenario Sand Box

P1 - IMPORTANT

USER STORY

> *As a manager, I want to test different contribution rates or weight changes without affecting live data, so that I can see the impact before committing. I also want to use this to calculate corrections for missed employees or terminated employees.*

CRITICAL DATA FLOW RULES

PHASE	DATA FLOW DIRECTION	ALLOWED
Before Launch Date	Sandbox → Production	**ONE TIME ONLY** via "Upload To Free Trial/Full Version" button
After Launch Date	Sandbox → Production	**NEVER - changes cannot flow to live data**
After Each Payday	Production → Sandbox	**AUTOMATIC** - archiving replaces sandbox data

USE CASE: FORGOTTEN EMPLOYEE (JOHNNY THE DISHWASHER)

1. Load last paid pool in Sandbox
2. Add Johnny's Wage, Hours, Job Role
3. See what his share would have been
4. Print for documentation
5. Options: Pay from house funds (enter as prepaid) OR add to next pool with note

USE CASE: EMPLOYEE TERMINATES BEFORE FIRST POOL

1. Plug new employee's Hours, Wage, Job Role into last period's Sandbox data
2. Calculate estimated share
3. Print as proof of estimated earnings
4. Include in final check

P2 Features (Nice to Have - Future)

- **Expert Admin Panel (Command Center)** - Back-office for managing all customer accounts, subscriptions, trial conversions
- **Email/SMS Notifications** - Trial expiration alerts, countdown reminders
- **Audit Logging** - Who entered/changed data and when
- **YTD Reports** - Annual summaries for W2 preparation

The Administrator Role

!! **Critical Warning:** "Do not give Admin privileges to anyone you do not trust to keep you out of trouble from Labor Department scrutiny."

The Administrator has **FULL responsibility** for setting:

- Contribution Rate
- Job Roles
- Each Job Role's variable "weight" based on overall contribution to customer satisfaction

Legal Accountability

- Tip pools may be analyzed for reasonableness and fairness by state Labor Boards
- Admin may be required to justify reasoning and methods
- Must keep Contribution Rate, Job Roles, and Weights FAIR and REASONABLE
- Changes require proper notification to affected employees

Change Notification Requirements

CHANGE TYPE	WHO TO NOTIFY	NOTICE PERIOD	METHOD
Contribution Rate Increase	All Contributors (servers)	30 days written	Signed acknowledgment form
Contribution Rate Decrease	All Distribution Beneficiaries	30 days written	Signed acknowledgment form
Individual Job Category Change	That individual	1 full pay period	Face-to-face, documented
Individual Weight Change	That individual	1 full pay period	Face-to-face, documented
Multiple Weight Changes	All negatively affected	1 full pay period written	Signed acknowledgment form

Audit Trail Requirements

The system **MUST** log all Admin Settings changes:

- Date of change
- Location affected
- What critical area was changed
- Who made the change
- Before/after values
- **UN-EDITABLE record** (for legal protection)

> *"If someone goes in and changes a variable and thinks it wise to blame my program I can produce the entries through my portal."*
>
> **— Tom LaChaussee**

Job Categories & Weights

Predefined Job Categories

Kitchen (BOH)

- Lead Cook
- Line Cook
- Pastry Chef
- Prep Cook
- Pantry Chef
- Dishwasher

Front of House

- Maitre D
- Host/Hostess
- Cashier
- Runner
- Busser

Bar

- Barista
- Bartender
- Sommelier
- Bar Back

Plus 5 write-in positions for custom roles not listed.

Weight System

- **Range:** 1 – 5 in 0.25 increments (17 options)
- **Weight 1:** Lowest share component in pool
- **Weight 5:** Highest share component in pool
- Everyone in same Job Category gets same weight

Example: Clam Shuckers

- Regular shuckers: Weight 3
- Lead Shucker (super star, non-supervisory): Weight 5, own category
- Combined with higher hourly wage = appropriately larger share

Key Principles

1. **Hours x Rate x Weight** formula rewards:
    - Experience (reflected in hourly rate)
    - Hours worked
    - Job category impact on customer satisfaction

2. **TipSharePro differentiator:** Wages as a factor - "The single biggest determining factor of who is contributing most to the Chain of Service"
3. **Fairness over equality:** "If the pool was done on a straight hours worked times a single job category weight, the Doctor and the Nurses would get the same rate per hour. That would be weird and frankly un-American."

Estimated Impact

- $100K monthly sales → ~$1,000 pool per pay period
- Annual: ~$26,000 in additional compensation for pool recipients
- Benefit: Reduced turnover = reward for management

Requirements Documentation

Non-Functional Requirements

Performance Targets

METRIC	TARGET	MEASUREMENT
Page Load Time	< 2 seconds	Time to interactive
Calculation Time	< 500ms for 100 employees	Server processing
API Response Time	< 200ms (95th percentile)	Backend latency
Database Query	< 100ms	Slow query log

Scalability Needs

DIMENSION	TARGET	DESIGN APPROACH
Concurrent Users	1,000	Stateless API, connection pooling
Customers	500 restaurants	Tenant isolation, indexed queries
Locations per Customer	20	Efficient joins
Employees per Location	100	Pagination, lazy loading
Pay Periods (History)	5 years	Data archiving, partitioning

Security Requirements

REQUIREMENT	IMPLEMENTATION
Authentication	Username/password + 2FA (email or SMS)
Authorization	Role-based access control (Admin, Manager, Designee)
Data Encryption	TLS 1.3 in transit, AES-256 at rest
Session Management	30-minute timeout with countdown warning
Tenant Isolation	Database-level row filtering, never trust client
Audit Trail	Log all data modifications with user/timestamp

Database Schema (Conceptual)

Multi-Tenant Data Model

Development Phases

Phase 1: Demo (Current Priority)

Static/interactive demo for marketing. No authentication. Settings preview with some features blocked. Sample data entry. Results/distribution display. PDF print capability. Lives on TipSharePro.com landing page.

Phase 2: Full Single-Location Version

Real authentication (email/password + 2FA). Complete settings configuration. Daily entry workflow. Pay period calculations. Distribution reports. Cloud data storage. Stripe subscription integration.

Phase 3: Multi-Location Support

Location selector. Admin view across locations. Per-location pools. Aggregated reporting.

Phase 4: Advanced Features

Expert Command Center. Scenario Sandbox enhancements. YTD archiving. W2 reporting export. Advanced audit logging. Email/SMS notifications.

Critical Questions Checklist

Verified Items

- ✓ **Existing solutions we're improving upon?**
  Yes: Basic Excel tip pooling, enterprise payroll add-ons. We're targeting the mid-market with a specific Hours x Rate x Weight algorithm.

- ✓ **What's the minimum viable version?**
  Demo (Phase 1): Interactive preview with sample calculations, no login, PDF export

- ✓ **Potential risks or unintended consequences?**
  Legal Risk (compliance), Privacy Risk (wage data), Fairness Perception (hidden algorithm)

- ✓ **Platform-specific requirements?**
  Web-first, responsive design, PDF generation in browser

Resolved Questions (January 9, 2026)

- ✓ **Q1: Scenario Sand Box Purpose**
  See detailed specification in Features section. The Demo focus should be on the Distribution page next so Demo is ready.

- ✓ **Q2: Multiple Job Categories / Same Employee Different Positions**
  YES, this happens. Posted Distribution Report: Keep earnings SEPARATED by position. YTD/EOY Totals: COMBINE into single employee line.

- ✓ **Q3: Historical Rate Changes / Mid-Period Raises**
  Make another entry on Distribution Table with new rate. Policy: Tell managers NOT to give raises mid pay period.

- ✓ **Q4: Cloud Storage Costs**
  Tom needs advice. Initial: Pay per GB. Future goal: Flat fee per TB. Subscription should cover

storage + legal + accounting + employees + advertising.

Remaining Gaps

? **Prepaid Entry Handling:** Exact workflow for adjustments via prepaid line needs detailed specification. Prepaid amounts must flow to YTD and EOY totals.

? **Trial Period Implementation:** Free Trial IS the Full Version (no "Free Trial" label visible). Countdown display in last 10 days. Last 5 days: Email and text alerts to Administrator.

? **Trial-to-Paid Data Migration:** Does trial data persist when converting to paid? (Assumed YES) Any cleanup or verification required?

Appendices

Appendix A: Glossary

TERM	DEFINITION
Contribution	Amount a server puts into the tip pool (% of sales)
Distribution	Amount an employee receives from the tip pool
Basis	Hidden calculation: Hours x Rate x Weight (never shown)
Variable Weight	Management-assigned factor (1-5) for job category impact
Pay Period Ending (PPE)	The last day of a pay cycle
Scenario Sandbox	Test environment for what-if calculations
Designee	Data entry role with limited permissions
Tenant	A restaurant organization in the multi-tenant platform

Appendix D: Why Use All Sales as Contribution Factor

IRS Alignment

"All Sales" is adjusted for (by IRS standards): Sales tax, Take-out orders, Retail sales, Non-tipped meals, Owner meals

Why NOT Use CC Tips or All Tips

METHOD	PROBLEM
CC Sales	Cash tips not properly accounted
CC Tips	Understates actual tips received
All Tips	Directly tipped workers easily hide cash tips
Cash Apps	Customers using to bypass accounting

> *"The whole reason for doing a Chain of Service pool is to put more income into the hands of BOH workers who management can't afford to get significant raises to because minimum wage eats up labor dollars first."*
>
> **— Tom LaChaussee**

Appendix E: Design Feedback from Tom

ELEMENT	FEEDBACK
Foundation colors	"Mostly cool" - approved
Text colors	"Like it" - approved
"Mahogany" color	Came through as dark olive - "I like the dark olive"
Pastel accents	**"Don't get too enamored"** - wants more bold color
Overall	"Throw in some color or I'll fade off to sleep"
Logo reference	**"Take a look at my Logo. Not bashful."**

Appendix G: Logo & Brand Assets

FILE	DESCRIPTION	USE CASE
fulllogo.png	Full logo with text + tagline	Marketing materials, website header
fulllogo_transparent.png	Transparent background	Over images/colored backgrounds
icononly_transparent_nobuffer.png	Icon mark only	App icon, favicon
textonly.png	Text wordmark + tagline	Text-only contexts

Brand Colors (Extracted from Logo)

Burnt Orange
`#E85D04`

Lime Green
`#82B536`

Navy Blue
`#1A4B7C`

Cyan
`#35A0D2`

Appendix C: Client Requirements Source

All requirements derived from:

1. Chat transcript: December 9, 2025 - January 4, 2026
2. Original Excel workbooks
3. Marketing documents
4. HTML Mockup: tip-share-pro-mockup.html
5. Contract: December 2025
6. **January 9, 2026 Documentation Package:**
    - Rough Flow Chart.pdf
    - Demo - Settings Page.pdf
    - Full Version - Settings Page.pdf
    - pdf How Demo,Sand Box,Free Trial work.pdf
    - pdf Job Categories & Weights.pdf
    - pdf Why Sales as....pdf
